GRIFFIN™
FLUID MANAGEMENT

Expanding Our Reach. Strengthening Your Ground.

COMING SOON NEAR YOU!
Local Support. National Resources.
24/7 Response.

For more than 90 years, Griffin Fluid Management has delivered engineered fluid management solutions for critical infrastructure, construction, industrial, and environmental projects across the country.

Now, we're expanding our presence into **Northern California**.

From groundwater control to temporary bypass systems, our team brings the engineering depth, specialized equipment, and field expertise required to keep complex projects moving forward safely and efficiently. Be ready for a new level of partnership, responsiveness, and accountability in your region.

Engineered to Solve. Delivered with Excellence.

800-431-1510

Four Core Capabilities. One Integrated Partner.

DEWATERING

Precision-engineered groundwater control systems, from wellpoints and deep wells to eductors, designed to protect stability, safety, and schedules.

WATER TREATMENT

Temporary and permanent treatment solutions for sediment, pH adjustment, heavy metals, VOCs, and site-specific contaminants, engineered for compliance.

PIPELINE TESTING & INTEGRITY

Hydrostatic testing, fill & test spreads, cleaning, pigging, and integrity services that help protect assets and reduce operational risk.

SEWER BYPASS & PUMP RENTALS

Comprehensive pump fleet and rapid deployment support to maintain flow during maintenance, emergencies, and infrastructure upgrades.

What This Means for Northern California

Faster mobilization and local support
National resources with regional expertise
Single-source accountability from engineering through execution
24/7 emergency response capability
